Technical Skills

Strong: React.js, CSS3, JavaScript (ES5, ES6), APIs, Bootstrap 4, Node.js, HTML5, OOP, PostgreSQL,

Experienced: Python, jQuery, Express, Ajax, Procedural Programming, UI/UX, JSON, CRUD

Tools: AWS, Git, GitHub, VS Code, Slack, Chrome Dev Tools, Agile Methodology, npm, webpack, Fetch Requests

Professional Experience

Software Engineer, *Mindstill, LLC*

May 2020 - Present

- Work with CEO directly on company's website design using HTML5, CSS3, and **JavaScript**
- Build fully responsive, mobile friendly website to showcase company's mobile application
- Collaborate with CEO on developing and implementing long term web strategy

Web Development Teaching Assistant, *LearningFuze*

May 2020 - Present

- Explain coding best practices and debug applications written by LearningFuze students
- Support students by clarifying difficult concepts to better understand code
- Provide mentorship and assist with teaching LearningFuze students programming fundamentals

Account Manager, *Shells and Fish Import & Export Co*

Oct 2015 - Present

- Concentrate on generating new business leads and networking at annual seafood trade show in Boston
- Manage customer accounts by sending current offers on product availability and market trends
- Manage current inventories of product by generating advertisements for large inventory positions

Applications Developed

Roommates GitHub [🔗](#)

- A full stack **CRUD** web application developed to help users organize groceries in a shared refrigerator
- Implemented **Node.js** and **Express** for server-side management and utilized **PostgreSQL** for user data
- Designed **API** endpoints allowing a user to update food quantities, delete food, view groceries, and view fridge members

Novelty Keycaps_ GitHub [🔗](#) | Live [🔗](#)

- Full Stack e-commerce **Content Management System (CMS)** to create, read, update and delete cart and product data via **Fetch Requests**
- Incorporated **Node.js** with **PostgreSQL** to track shopping cart data of individual clients
- Updated the DOM dynamically for the landing page with **React.js** and styled using **Bootstrap 4**

MLB Memory Match GitHub [🔗](#) | Live [🔗](#)

- Immersive Major League Baseball inspired memory matching game with statistic tracking, sound effects, and full-screen animations
- Constructed using procedural programming and **jQuery** to dynamically shuffle and flip cards
- Styled with **HTML5**, **CSS3**, and Flexbox with mobile-responsive design in mind to optimize **UX**

Education

California State University Fullerton, *B.S. in Business Administration: Marketing*

LearningFuze, *Accelerated Web Development Program*

- 70+ hours of programming per week for total of 800+ hours of programming in a simulated work environment with project deadlines and mentorship from senior developers
